Custom Bag Production — One-Page Process Overview

Six milestone-driven stages, from your first concept sketch to the container at your door. Own production lines in China, a commercial MOQ of 300 units per style per color, and one project owner from CAD to packing.

01 • 48-HOUR CAD

Design Consultation & CAD

Sketches, reference images, or a full tech pack become precise CAD patterns. 3D renderings preview proportions before any cutting. Three revision rounds included at no charge.

02 • SWATCHES IN 5 DAYS

Material Selection & Sourcing

Material options with physical swatches, from full-grain leather to GRS-certified recycled PET. Every batch tested for tensile strength, colorfastness, and chemical compliance.

03 • 7–10 BUSINESS DAYS

Prototype Sampling

A physical sample in your chosen materials and hardware. Every angle photographed with a detailed inspection report. Iterated until the details are right. Complex constructions 12–14 days.

04 • APPROVAL GATE

Pre-Production Confirmation

A PP sample built with production tooling and final materials — the exact item customers will receive. A written QC plan sets inspection points and quality limits. You approve before bulk.

05 • 2–8 WEEKS

Mass Production

Scale from 300-unit pilots to high-volume runs across our dedicated lines. Weekly status reports with photographs. In-line QC inspection at every 200 units.

06 • DDP TO 40+ COUNTRIES

Quality Control & Global Delivery

AQL 2.5 final inspection with random sampling and a full digital QC report. Container loading supervision. DDP shipping to your warehouse, 3PL, or Amazon FBA — freight, customs, duties handled.
